

Stay on your best path: Get more done with less stress

The First Multi-User Plan & Work Navigator

WorkNav is online and apps software that makes it easy for stakeholders to concurrently plan and navigate through their work. It automatically adjusts your ToDo path to synchronize with plans and with other users' ToDo paths.

People need instant navigation information from all the plans they are involved in, so they can easily work out how to best use their time and effectively work together.

A New Solution

WorkNav provides a revolutionary new solution that makes it unbelievably easy to work together to plan, navigate and get work done. Validated in workplaces, it is more than just a better way of using technology to improve existing, largely manual traditional or project management solutions.

In particular, it automatically handles together the detail of relevant strategies, projects, changes, events, processes, meetings and business-as-usual (BAU). So individuals can **spend their time working together getting things done**, rather than on boring administration that adds little value. In addition, Progress/Gantt charts are driven by ToDo's actually completed, not educated guesses.

Existing Problems WorkNav Solves

Most people agree that a plan makes collaboration easier and gets things done better and faster. But planning is a largely manual process that takes a lot of time, effort and know-how to apply successfully. Existing planning:

- Takes a lot of time and effort to create plans
- Usually doesn't provide each stakeholder with understandable and actionable information
- Needs to be facilitated by a manager or team leader
- Suffers when stakeholders are physically separated
- Requires stakeholders to apply a lot of manual processes to; find, sort out, coordinate, track, remember and do what needs to be done at the right time and place
- Needs meetings and other communications
- Needs a lot of updating to stay relevant
- Is difficult to coordinate and navigate
- Hides the big picture - how plans relate to each other

Automatically create powerful Live Plans

WorkNav employs a simple live plan template that anyone can use to input what they believe needs to be done to deliver the plan goal. Live plan templates have been used by over 30,000 people in 100 countries.

Planning has never been so easy. Stakeholders can see and iteratively improve any Live Plan they are involved in from anywhere at any time. This keeps the plan current

and captures the complete plan as implemented. Stakeholders are automatically informed about any changes that affect them.

Use Live Plans for all tasks - big and small

Related live plans can be organised in a tree framework. Plans can be big for strategies, projects, changes, events or small for parts of big plans, processes and BAU tasks.

You navigate from live plans, because they contain the detail about what you need to actually do to contribute.

Navigate with Live Plans and Your ToDo list

WorkNav automatically creates a personal ToDo list for each user from relevant Live Plan ToDo workflows. Use your personal ToDo list to navigate a ToDo path that works for you and maximises your contribution to work.

Easy Anywhere, Anytime Access

WorkNav can be accessed from browsers and mobile apps, so relevant work information can be instantly entered and updated by stakeholders, when and where they need it.

Privacy and Security

Each stakeholder only sees the tasks where they are a team member. Task team membership is controlled by the person responsible for the task or their delegate.

Planning and Navigating made easy

WorkNav software automatically provides stakeholders with the detail and feedback they need to be agile and to make sound decisions. Stakeholders simply enter what they know and WorkNav automatically turns this information into powerful plans and ToDo lists that are easy to understand and action. Costly time consuming meetings and communication breakdowns are eliminated.

Benefits

Using WorkNav, you can:

- Automatically create and update Live Plans anywhere at anytime.
- Know what is happening and see what to do to make the best use of your time.
- Stay synchronized with other stakeholders, in relevant strategies, projects, activities, processes, and ToDos.
- Quickly respond to work changes to stay in control.
- Integrate planning, time sheeting, costing, accountability and audit trails into the work being done.
- Reduce stress and get more productive work done.
